# IMPROVE YOUR BOTTOM LINE

## About Us

We specialize in supply chain execution solutions, concentrating on lean manufacturing and distribution. Inventory, cycle time, and labor reduction are the prime targets of our focus.

Software, hardware, integration, training, customer support... wmsVision is the time-tested systems developer and single source that you can rely on for order management, warehouse management, manufacturing management, and transportation management systems. Fully integrated or applied individually, wmsVision solutions enable clients to attain world-class customer satisfaction levels quickly, efficiently, and affordably.

chainView, our flagship suite, integrates omsView, an order management module, and tmsView, transportation management software, with wmsView, the warehouse management application which is the centerpiece of the suite.

Every working day, chainView is enabling Fortune 1000 companies to meet current objectives and to prepare for an even more rewarding future. wmsVision can help your company into that new arena. There's no obligation for a consultation.

# Major Features

## INBOUND

- Advance Ship Notice
- Yard Management
- Dock Scheduling
- Receiving (One Scan)
- System Direct Put Away
- Cross Docking/  
Shortage Clearing

## OPERATIONS

- WEB ORDER ENTRY
- LOT/SERIAL NUMBER TRACKING
- CYCLE COUNT
- PHYSICAL INVENTORY
- BACK-FLUSHING
- INPUT OUTPUT CONTROL
- VELOCITY MANAGEMENT
- SPACE MANAGEMENT

## OUTBOUND

- WAVE PLANNING
- SYSTEM DIRECT PICK AND PACK
- OUTBOUND CONTAINER TRACKING
- SYSTEM DIRECT TRUCK LOADING
- BILL OF LADING/PACKING SLIP
- TRANSPORTATION MANAGEMENT

## A Testimonial...

(Please note that wmsVision, inc. was formerly ISSI. WHMS is now wmsVision.)

“Implementing the ISSI Warehouse Management System was one of the best investments we have made. The system and processes have driven improvements which are key to our leadership in distribution. We implemented the real time Cycle Count features which maintain our excellent inventory accuracy while maintaining an Inventory exemption status. Our Service levels are 95% at the Order level and 99% at the line item level. We have not missed service due to inaccurate inventory in the year 2001. Our Warehouse Management System coupled with the i2 APS system have enabled a \$220M (60%) inventory reduction in the past 6 months. The Demand Pull process managed through the warehouse Management System interfaces with our key suppliers. This process drives supply into our manufacturing process when and where we need it. At the same time the unique information we require such as individual product serialization is exchanged electronically therefore we are more efficient in our Operations. Business solutions are critical; the ISSI Warehouse Management System and Support Team have provided excellent tools and support to meet and exceed Business needs.”

Regards,

Tom Weeks  
Director Materials Management  
Nortel Networks

# Interfaces and Integration

WmsVision helps you to obtain the most payback of your investment. With interfaces to Radio Frequency devices and material handling equipment, wmsVision ensures a flow-through, waste free, high quality flow of inventory and information throughout your manufacturing and distribution network.

Our software has been exquisitely engineered to insure easy and high integrity connectivity. With our proven integration architecture, WmsVision can easily integrate with any systems in your enterprise including Enterprise Resource Planning (ERP), Advanced Planning System (APS) and Customer Relationship Management (CRM) systems.

## Implementation and Support

To help you to obtain the best return on investment, wmsVision offers tactical and strategic consulting and implementation services. wmsVision engineers are proven to identify waste to be eliminated and value to be created without tradeoff to your entire operations.

Our commitment to you does not stop after the system is installed and tested. We provide a variety of customer support options to ensure your continued satisfaction. We never underestimate the imperative to keep your operations up and running.

Our services include:

- 24x7 mission critical, phone tracking response
- Preventative maintenance
- Education and training for new hires and to support system updates
- Controlled access customer web pages
- Onsite and remote troubleshooting/assistance
- Data backup and retrieval
